Slovenia is celebrating 20th anniversary of its independence in the year 2011. Regardless of the difficult economic conditions due to global crisis and recession in the last two years Slovenia has made significant progress in the last two decades. To demonstrate this claim, let us mention some statistical data. GDP rose 73% from the year 1991 to 2011, labour productivity increased by 77% in and personal incomes rose approximately by the same percentage.
